01 Access the Portal

Portal URL Open your browser and go to `http://mirae-portal.local.lt`

When you open the link, your browser will show a login popup. Enter your credentials:

Field	Value
Username	admin
Password	(provided separately by Mirae Advisory)

Security Reminder Always click **Logout** in the top-right corner when you are finished. Do not share your login credentials with anyone.

02 Dashboard

The Dashboard is your homepage. It gives you a real-time overview of your entire outreach operation.

Dashboard Leads Sent Log Reports
Total Leads
109,414
Emails Sent
788
Reply Rate

Metric	What It Shows	Target
Total Leads	All companies in the database across all campaigns	Grows with each leadgen run
Emails Sent	Total outreach emails successfully delivered	Should increase daily
Reply Rate	Percentage of recipients who wrote back	2â€“10% is healthy

ðŸ“‘

Why Is Reply Rate Empty? If you see a dash (â€”) instead of a percentage, it means **IMAP accounts have not been configured yet**. The system cannot detect replies without IMAP access. See Section 05 for setup instructions.

ðŸ“‘§ 03 â€” Sent Email Log

Menu: Click **Sent Log** in the top navigation bar.

This page shows **every single person who was emailed** across all campaigns. This answers the most common question: "Did we already contact ABC Construction?"

What You See

Column Description

Company The recipient's company name

Recipient Name and email address

Subject The email subject line sent

Email # 1 = first touch, 2 = follow-up, etc.

Tier A (aggressive) / B (nurture) / C (slow burn)

Status sent / failed / replied / bounced

Sent At Exact timestamp of delivery

How to Use

1

Search â€” Type a company name or email in the search box and press Enter.

2

Filter by Status â€” Click the colored status pills (e.g., "sent: 788") to show only emails with that status.

3

Navigate Pages â€” 100 rows per page. Use Next/Prev buttons at the bottom.

ðŸ’;i

Pro Tip Filter by failed to find emails that did not send. This usually indicates a bad email address that should be removed from future campaigns.

🔍 04 📊 Daily Performance Report

Menu: Click **Reports** in the top navigation bar.

This page shows your email performance **day by day**. Use it to spot trends and catch problems early.

Total Sent

788

Total Failed

0

Total Replied

0

Total Bounced

0

Column	What It Means	Healthy Range
Sent	Emails successfully delivered that day	Should match your daily target
Failed	Emails that could not be delivered	Ideally 0
Replied	Recipients who wrote back	Needs IMAP configured
Bounced	Invalid email addresses	<5% of total sent
Delivery Rate	$\text{Sent} \div (\text{Sent} + \text{Failed})$	>95%
Reply Rate	$\text{Replied} \div \text{Sent}$	2-10%

🔍

What to Watch If your **Delivery Rate** drops below 95%, your email list needs cleaning. If **Reply Rate** is consistently below 2%, your subject lines or targeting may need adjustment.

🔍 05 📊 IMAP Settings (Critical)

Menu: Click **IMAP** in the top navigation bar.

🔍

This Is Required Without IMAP configured, the system **cannot** track replies, detect bounces, calculate reply rates, or trigger follow-up sequences. This is the #1 reason the dashboard shows empty metrics.

What You Need

- A **Gmail** or **Google Workspace** email address
- An **App Password** (NOT your normal Google password)

How to Generate an App Password

1

Go to myaccount.google.com/apppasswords

2

Sign in with your Google account

3

Select app: **Mail**

4

Select device: **Other (Custom name)** â†’ type "Mirae Portal"

5

Click **Generate**. Google shows a 16-character password like abcd efgh

ijkl mnop

6

Copy this password immediately. Google will not show it again.

How to Add the Account in the Portal

1

Go to **IMAP Settings** in the portal

2

Click **Add IMAP Account**

3

Fill in the form:

Email Address your.name@miraeadvisory.com

App Password abcd efgh ijkl mnop (the 16-char code)

IMAP Server Leave as imap.gmail.com

IMAP Port Leave as 993

4

Click **Save**, then **Test Connection**

ðŸ”i

Do This For Every Sender If your team uses multiple sender accounts (Louis, Melvin, Andrew, admin), each person must add their own IMAP account. The tracker only scans inboxes that are configured.

After Adding IMAP

Click **Run Tracker** next to each account. This immediately scans the inbox for replies. From then on, the tracker runs **automatically every day at 8:00 AM SGT**.

ðŸ”i – 06 â€” Replies

Menu: Click **Replies** in the top navigation bar.

This page shows every response received from recipients. Each reply is automatically analyzed for sentiment.

Sentiment	What It Means	Action
Positive	Interested, wants to learn more, requests a call	Follow up quickly
Neutral	Asking questions, needs more info	Send details
Negative	Not interested, bad timing	Do not follow up

Unsubscribe Wants to opt out

Respect immediately " do not email again

Filter by Sentiment

Use the dropdown at the top of the page to show only replies of a certain type. For example, filter by **Positive** to see all hot leads that need immediate follow-up.

š ĩ, ♦

Empty Page? This page will be completely empty until: (1) IMAP accounts are added, and (2) the tracker has run at least once. If you just added IMAP, click **Run Tracker** manually to populate the page.

œ... 07 € Deliverability

Menu: Click **Deliverability** in the top navigation bar.

This page checks whether your domain is properly configured for email sending. Poor configuration means your emails land in spam.

Run a Domain Check

- 1
Enter your domain: miraeadvisory.com
- 2
Click **Run Check**
- 3
Review the results:

Check	Pass	Fail
SPF	œ... Your server is authorized to send	œ ♦œ Emails may be rejected
DKIM	œ... Cryptographic signature valid	œ ♦œ High spam risk
DMARC	œ... Policy enforced	œ ♦œ Receivers unsure what to do
Health Score	œ... 90+ is excellent	œ ♦œ Below 70 needs immediate fix

How to Fix DKIM Failure

š Ÿš

DKIM Failure = Spam Folder If DKIM shows FAIL, most of your emails are going to spam. This is the #1 deliverability killer and must be fixed immediately.

- 1
Log in to **Google Workspace Admin** (admin.google.com)
- 2

Navigate to: **Apps** → **Google Workspace** → **Gmail** → **Authenticate email**

3

Find your domain and click **Generate new record**

4

Click **Start authentication**

5

Wait 1–2 hours for DNS propagation, then re-check in the portal

🔍 08 Leads

Menu: Click **Leads** in the top navigation bar.

Browse every lead file in the system. Each card shows:

- **Filename** → click to open the full table
- **Stage** → leadgen → enriched → verified → outreach → sequences
- **Row count** → how many companies in the file
- **Emails** → how many have email addresses
- **Tier breakdown** → A/B/C/D quality distribution

Stage Filters

Click the stage pills at the top to filter:

Stage	Meaning
leadgen	Raw leads from search → not yet enriched or verified
enriched	Contact info and decision-maker names extracted
verified	Emails verified as deliverable
outreach	Ready for email campaigns
sequences	Already assigned to an email sequence

Lead Detail Table

Click any file to see the full table. You can:

- **Search** → free-text across all columns
- **Sort** → click any column header
- **Filter** → by sendability, tier, or minimum score
- **Bulk delete** → check rows and click Delete Selected

⚠️ 🔍

Deletion Is Permanent Bulk delete rewrites the CSV file in-place. There is no undo. Export a backup first if you are unsure.

🔍 09 Outreach Controls

Menu: Click **Outreach** in the top navigation bar.

This is your campaign command center. You can pause, resume, and monitor your email sending.

Button	When to Use	Effect
Pause	Going on holiday, fixing an issue	Stops all future sends until resumed
Resume	Ready to start sending again	Re-enables the daily 8am cron
Send Now	Need immediate send (e.g., time-sensitive offer)	Triggers send immediately, respects daily limit
Skip Today	Don't want to send today but resume tomorrow	Skips one run, resumes next day

Watchdog Banner

If you see a **red banner** saying "3+ consecutive failures â€” campaign auto-paused," this means something is broken. Common causes:

- SMTP password expired
- Google Workspace account suspended
- Internet connectivity issue

Fix: Resolve the root cause, then click **Resume**.

Sequence Wizard

To generate a new batch of emails from a lead file:

1
Click **Outreach** â†’ **+ New Sequences**

2
Select a lead file from the dropdown

3
Enter your **sender name**

4
Click **Generate Sequences**

ðŸ’i
Wizard Does Not Send Immediately The Sequence Wizard only prepares emails. They are sent by the daily cron at **8:00 AM SGT**. If you need them sent sooner, click **Send Now** after generation.

â€” 10 â€” Common Questions

Q: Why is Reply Rate empty on the dashboard?

A: You haven't added IMAP accounts yet. See Section 05.

Q: Why is the Replies page empty?

A: Same reason â€” no IMAP, or the tracker hasn't run yet. Click **Run Tracker** in IMAP Settings.

Q: How do I know if emails are actually sending?

A: Check **Dashboard** → Emails Sent, or **Daily Reports** for day-by-day numbers. The runs.log also shows each execution.

Q: Can I see exactly WHO was emailed?

A: Yes → go to **Sent Log** and search by company name or email address.

Q: What does "campaign exhausted" mean?

A: All leads in the current sequence have been sent to. You need to generate new sequences from another lead file, or ask Mirae Advisory to run a fresh lead search.

Q: Is my data safe?

A: Yes. The portal uses password protection, CSRF tokens on all actions, and IMAP passwords are stored with root-only file permissions (0600). No credentials are exposed in URLs or logs.

Q: Can I upload my own lead list?

A: Yes → go to **Upload**, select your CSV, and click Upload. The file appears immediately in the Leads list.

Q: What if I accidentally delete leads?

A: Deletion is permanent. Always export a backup before bulk deleting. The portal does not have an undo function.
